

**PIN 23951 City of Vista  
Paseo Santa Fe Green Street Project**

The reviewers suggest the following comments be addressed in the Full Proposal (FP):

- Information provided in the work items needed to be more concise and easy to read.
- The schedule should be tightened up in the FP. The applicant did not provide any room for possible delays with the current schedule.
- It was unclear if the contaminants to be removed will actually be addressed by installing the LID BMPs listed and if the current data shows that the contaminants are present in the current stormwater runoff at levels that degrade water quality.
- The impaired waters section (Question 12) lists a lagoon that is primarily fresh water. If this project is to benefit a lagoon, the lagoon MUST be 100% freshwater. It is acceptable if the project benefits the creek that then flows into the lagoon.
- The Concept Proposal stated that this project is a portion of the larger Paseo Santa Fe Corridor Revitalization Project. The FP should provide a list of all the phases of the larger project and clearly identify which phase of the larger project the FP will address.
- The applicant needs to clearly state what beneficial use would be improved by the implementation of the LID BMPs.
